ELSEVIER

Journal of Materials Processing Technology 97 (2000) 213–215

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 97

Anisotropy
Strain field of deep drawn knitted fabric reinforced thermoplastic composite sheets, 95
Study on wrinkling limit diagram of anisotropic sheet metals, 88
Arbitrary Lagrangian–Eulerian (ALE) method
Elasto-plastic finite element simulation of rolling and compression between wedge-shaped dies, 132
Automatic line
Deflection of a metal strip between elements of an automatic line, 194

π-bondings
Physics of plasticity, 19
Bottom growth
Effect of base profile of a DI beverage can and material properties on the dome reversal pressure, 54

CAE
Optimization of the injection molding process of short glass fiber reinforced polycarbonate composites using grey relational analysis, 186
Carbide inserts
The effect of the multi-layer surface coating of carbide inserts on the cutting forces in turning operations, 114
Ceramic material
Study on the relationship between laser processing sound and material removal characteristics, 168
Composite sheets
Strain field of deep drawn knitted fabric reinforced thermoplastic composite sheets, 95
Composites
Optimization of the injection molding process of short glass fiber reinforced polycarbonate composites using grey relational analysis, 186
Continuous extrusion forming
A study of the application of upper bound method to the CONFORM process, 153
Crystallization
Physics of plasticity, 19
Cutting forces
The effect of the multi-layer surface coating of carbide inserts on the cutting forces in turning operations, 114

Deep drawing
Simultaneous stretch forming and deep drawing in axisymmetrical sheet forming, 82
Three-dimensional numerical simulation of the deep-drawing process using solid finite elements, 100
Deflection
Deflection of a metal strip between elements of an automatic line, 194
Deformation
Physics of plasticity, 19
Deformation-strain
A mathematical theory of plasticity for compressible powder metallurgy materials — Part II, 110
Design
Effect of base profile of a DI beverage can and material properties on the dome reversal pressure, 54
DI can base profile
Effect of base profile of a DI beverage can and material properties on the dome reversal pressure, 54
Diamond wheel
Diamond grinding of super-hard materials, 120
Directional solidification
The dependence of lamellar spacing on growth rate and temperature gradient in the lead–tin eutectic alloy, 74
Dome reversal pressure
Effect of base profile of a DI beverage can and material properties on the dome reversal pressure, 54
Drag force
Mathematical modeling of the wall effect on drag forces in molding flow using optical fiber sensing data, 174

Electronics
A knowledge-base for electronics soldering, 1
Eutectic theory
The dependence of lamellar spacing on growth rate and temperature gradient in the lead–tin eutectic alloy, 74

Fabric reinforcement
Strain field of deep drawn knitted fabric reinforced thermoplastic composite sheets, 95
3-D FEM
3-D FEM analysis of the temperature field and the thermal stress for plastics thermalforming, 35
Finite element (FE) formulation methods
Elasto-plastic finite element simulation of rolling and compression between wedge-shaped dies, 132
Finite elements
Three-dimensional numerical simulation of the deep-drawing process using solid finite elements, 100
Formability
Simultaneous stretch forming and deep drawing in axisymmetrical sheet forming, 82

Grey relational analysis
Optimization of the injection molding process of short glass fiber reinforced polycarbonate composites using grey relational analysis, 186
Grinding
Diamond grinding of super-hard materials, 120

Hot cracking
Preventing welding hot cracking by welding with an intensive trailing cooler, 30

Elsevier Science S.A.
PII: S0924-0136(99)00401-X

Hot rolling
The effect of lubrication on mill loads during hot rolling of low carbon steel strips, 61
Hydrostatic stress
A mathematical theory of plasticity for the upsetting of compressible P/M materials, 107

Injection molding
Optimization of the injection molding process of short glass fiber reinforced polycarbonate composites using grey relational analysis, 186
Intensive trailing cooler
Preventing welding hot cracking by welding with an intensive trailing cooler, 30

Knowledge base
A knowledge-base for electronics soldering, 1

Lamellar spacings
The dependence of lamellar spacing on growth rate and temperature gradient in the lead–tin eutectic alloy, 74
Laser machining
Quality optimisation for laser machining under transient conditions, 158
Low and high frequency Q-switched YAG laser
Study on the relationship between laser processing sound and material removal characteristics, 168
Lubrication
The effect of lubrication on mill loads during hot rolling of low carbon steel strips, 61

Machining
The effect of the multi-layer surface coating of carbide inserts on the cutting forces in turning operations, 114
Main driving system
Dynamic characteristics of a rolling mill drive system with backlash in rolling slippage, 69
Material removal volume
Study on the relationship between laser processing sound and material removal characteristics, 168
Metal strip
Deflection of a metal strip between elements of an automatic line, 194
Model-based optimisation
Quality optimisation for laser machining under transient conditions, 158
Molding flow
Mathematical modeling of the wall effect on drag forces in molding flow using optical fiber sensing data, 174

NiP alloy
The study of ultra-precision machining and residual stress for NIP alloy with different cutting speeds and depth of cut, 200
Numerical simulation
Preventing welding hot cracking by welding with an intensive trailing cooler, 30
Three-dimensional numerical simulation of the deep-drawing process using solid finite elements, 100
Numerical solution
Deflection of a metal strip between elements of an automatic line, 194

Optical fiber sensors
Mathematical modeling of the wall effect on drag forces in molding flow using optical fiber sensing data, 174
Optimization
Optimization of the injection molding process of short glass fiber reinforced polycarbonate composites using grey relational analysis, 186
Simultaneous stretch forming and deep drawing in axisymmetrical sheet forming, 82
Orthogonal cutting condition
The study of ultra-precision machining and residual stress for NIP alloy with different cutting speeds and depth of cut, 200

Pb–Sn eutectic alloys
The dependence of lamellar spacing on growth rate and temperature gradient in the lead–tin eutectic alloy, 74
Plastics thermalforming
3-D FEM analysis of the temperature field and the thermal stress for plastics thermalforming, 35
Poisson's ratio
A mathematical theory of plasticity for the upsetting of compressible P/M materials, 107
Polycarbonate
Optimization of the injection molding process of short glass fiber reinforced polycarbonate composites using grey relational analysis, 186

Relative density
A mathematical theory of plasticity for compressible powder metallurgy materials — Part II, 110
A mathematical theory of plasticity for the upsetting of compressible P/M materials, 107
Relief control
Diamond grinding of super-hard materials, 120
Required power
A study of the application of upper bound method to the CONFORM process, 153

Self-excited vibration
Dynamic characteristics of a rolling mill drive system with backlash in rolling slippage, 69
Sheet forming
Strain field of deep drawn knitted fabric reinforced thermoplastic composite sheets, 95
Sheet metal forming
Effect of base profile of a DI beverage can and material properties on the dome reversal pressure, 54
Study on wrinkling limit diagram of anisotropic sheet metals, 88
Side extrusion
A study of the application of upper bound method to the CONFORM process, 153
Simplified model
A study of the application of upper bound method to the CONFORM process, 153
Soldering
A knowledge-base for electronics soldering, 1
Sound pressure level
Study on the relationship between laser processing sound and material removal characteristics, 168
Steel strips
The effect of lubrication on mill loads during hot rolling of low carbon steel strips, 61
Strain field
Strain field of deep drawn knitted fabric reinforced thermoplastic composite sheets, 95
Strain-hardening
Study on wrinkling limit diagram of anisotropic sheet metals, 88
Stretch forming
Simultaneous stretch forming and deep drawing in axisymmetrical sheet forming, 82

Strip loop
Deflection of a metal strip between elements of an automatic line, 194
Strip rolling
Elasto-plastic finite element simulation of rolling and compression between wedge-shaped dies, 132
Super-hard materials
Diamond grinding of super-hard materials, 120
Surface coatings
The effect of the multi-layer surface coating of carbide inserts on the cutting forces in turning operations, 114

Temperature distribution
Preventing welding hot cracking by welding with an intensive trailing cooler, 30
Temperature field
3-D FEM analysis of the temperature field and the thermal stress for plastics thermalforming, 35
Thermal stress
3-D FEM analysis of the temperature field and the thermal stress for plastics thermalforming, 35
Thermo-elastic–plastic
The study of ultra-precision machining and residual stress for NIP alloy with different cutting speeds and depth of cut, 200
Torque amplification factor
Dynamic characteristics of a rolling mill drive system with backlash in rolling slippage, 69
Transient heat-transfer
Quality optimisation for laser machining under transient conditions, 158
Transient strain
Preventing welding hot cracking by welding with an intensive trailing cooler, 30
Turning
The effect of the multi-layer surface coating of carbide inserts on the cutting forces in turning operations, 114

Ultra-precision cutting
The study of ultra-precision machining and residual stress for NIP alloy with different cutting speeds and depth of cut, 200
Upper bound method
A study of the application of upper bound method to the CONFORM process, 153

Variable restraint fixture
Preventing welding hot cracking by welding with an intensive trailing cooler, 30

Wall effect
Mathematical modeling of the wall effect on drag forces in molding flow using optical fiber sensing data, 174
Warpage
3-D FEM analysis of the temperature field and the thermal stress for plastics thermalforming, 35
Wedge-shaped dies
Elasto-plastic finite element simulation of rolling and compression between wedge-shaped dies, 132
Wringling limit diagram
Study on wrinkling limit diagram of anisotropic sheet metals, 88

Yield stress
A mathematical theory of plasticity for compressible powder metallurgy materials — Part II, 110
